

Nature Hunt

Learning objectives:

- To discover and identify different natural elements in an outdoor environment.
- To understand that different plants need different requirements for growth.

In pairs or groups, go and explore our woodlands and see what you can find.
Cross the items off the grid once you've found them.
There's spaces to draw more if you find anything else!

Questions to think about while exploring:

Where did you find each of the different items?

Was it light or dark?

Was it wet or dry?

Down low or up high?

Where do you think the plants get their water?

How did the plants differ from each other?
